

Studentkare — Feature Inventory

Personal Health & Care Services Platform

Application-side features	96	Implemented & tested
Features requiring external infrastructure	4	Contracts + scaffolding ready
Backend API endpoint groups	127	Auth, health, care, ops
Backend tests	134	pytest — all passing
Frontend tests	260	vitest — all passing
Role-specific dashboards	5	Student, Admin, Vendor, Clinician, Campus

Authentication & Accounts

- Verified OTP login & signup (email + WhatsApp)
- Database-backed, revocable HTTP-only sessions
- TOTP two-factor authentication
- Role-based workspaces (Student, Admin, Vendor, Clinician, Campus)
- One-click demo login for every role dashboard
- CSRF + origin checks on all mutations

Student Health Workspace

- Health overview dashboard
- Manual readings with dated, source-attributed trends
- Records vault: upload, download, share, delete, export
- Insurance details + out-of-pocket estimator
- Medication plans, dose logging, refill reminders
- Exercise & movement library with saved sessions

Appointments & Teleconsultation

- Appointment booking with capacity reservation
- Provider confirmation & state machine
- Reminder preferences & notification inbox
- Teleconsult waiting room + provider console
- WebRTC signalling contract (offer/answer relay)
- Meeting device pre-check (camera/mic)

Devices & Sensors

- Camera capture (preview, front/rear, retake)
- Foreground motion pedometer with session history
- Voice-note recording & playback
- Experimental camera pulse estimator (quality-gated)
- Native health adapter (HealthKit / Health Connect)
- Capability detection with honest states

Wellbeing & Screening

- Guided breathing (start/pause/finish)
- Thought-pop, grounding, memory, tracing, drawing
- Sleep wind-down routine
- Mood check-in & private journaling
- Vision acuity + color-vision screening
- Hearing tone tests (heard/not-heard responses)

Care Services

- Read-only care navigator (approved sources + citations)
- Approved knowledge source management
- Document intake + human review queue
- Health camps (register, check-in, station progress)
- Campus affiliation verification
- Notification inbox with delivery/read state

Provider & Operations

- Catalog management (publish, stock, hide)
- Staff account provisioning
- Work requests (accept/decline/dispatch/complete)
- Appointments queue & follow-up tasks
- Care-request follow-up worker (2-hour)
- Intake review queue

Insurance & Payments

- Policy details & benefits directory
- Claim request drafts
- Insurer eligibility + claim submission (honest contract)
- Payment initiation + signed webhook verification
- Order payment status

Admin & Observability

- Integration health monitor (2-hour probes)
- Scheduled jobs console (run-now)
- Agent evaluation harness (grounding/refusal/isolation)
- Workflow audit history
- Operational reports

Infrastructure & Release

- Durable 2-hour workflow scheduler (jobs/runs/outbox)
- Alembic migrations + production migration runner
- Fail-closed production startup guard
- PWA offline application shell

- CI hardening (build, secret scan, prod guard, audit)
- Accessibility (focus rings, skip link, reduced motion)
- Indigo light/dark theme

Remaining (external dependencies)

These 4 features require external credentials, a native app target, or live infrastructure. Each has its contract, honest-state handling, scaffolding, and tests in place.

Online payments provider	A real payment gateway credential + signed webhook receiver
Pharmacy prescription review	A licensed review & substitution workflow
Live WebRTC media	A deployed signalling server + TURN relays
Native pedometer / OS sync	A native app bridge (React Native / Expo target)

Testing summary

Backend (pytest): 134 tests passing — auth, security fixes, scheduler, appointments, consultation, medication, insurance, records privacy, campus, health camp, payments, knowledge, document intake, follow-up, inventory, encounter, insurer, agent evaluation, production guard, migrations.

Frontend (vitest): 260 tests passing — workflow routing, accessibility, native health, WebRTC, movement history, plus the full application feature suite.

End-to-end: the full workflow smoke test passes (registration, sessions, private readings/documents, server-priced order, vendor fulfilment, admin support/audit, cross-user isolation, mobile responsiveness, exercise bookmarks).

Studentkare — feature inventory. Application-side implementation is feature-complete (96/100); the remaining 4 items are externally-gated. See docs/integration-guide.md for activation steps.
